ENCL. #3

13 March 1964

SUBJECT: Status of ADP in D/GG

A. Collation Project

1. Office of Computer Services prepares a machine listing from NPIC's all-source intelligence files. It includes a brief description of each target and references to specific intelligence sources.

2. CGS furnishes through OCS a machine listing of COMOR targets by AMS map number, by geographic coordinates, and by BE number.

3. OCR

a. SR

(1) SR makes a machine run of SI documents pertaining to each map sheet in their preparation of a list of intelligence items.

(2) SR has coded in depth all PI reports to permit recall by geographic coordinates of items of intelligence value. A machine listing will be provided for each map sheet, beginning next week.

b. GR furnishes for each map sheet a machine listing of available ground photography (through Machine Division).

c. IR prepares for each map sheet a machine listing of locations for which intelligence is available.

d. At the present time a machine listing of BGN place names is being provided by Machine Division on an experimental basis to facilitate research and possible setting of type by AMS.

B. Cuba

This example was merely an ADP adaptation of material previously available. The names on the Cuba 1:50,000 maps had been made into a gazetteer by NIA. We borrowed and used the magnetic tape to make IBM

GROUP 1
Excluded from automatic downgrading and declassification

cards from which were extracted all the finca names. The finca cards then became a tool for use in tracing current developments in property disposition in Cuba, for use in analysis of defector reports.

C. East Germany

The 1:50,000 gazetteer of East Germany was incorporated in IR's East German installations list so that installations can be located by running coordinates, then place names. Not all installations are given -- only those which IR would normally file.
